### **ECLIPSE™ 700 SOFTWARE UPGRADE ENHANCES IT COMPATIBILITY, FUNCTIONALITY AND DATA ENCRYPTION**

FRISCO, TEXAS—March 28, 2008—Digital Horizon Solutions (DHS), a progressive provider of integrated access control solutions for today's IT-centric environments, announced today the feature update release of Eclipse™ 700, the company's enterprise-class security management solution. The new features simplify installation, intensify data protection, and allow superior customization options for life safety and asset protection.

Feature upgrades of Eclipse 700 include:

- Global Linkage - The new service provides the ability to configure macros that execute based on conditions anywhere in the system, and anywhere around the globe. New SMS settings include Alltel, Boot Mobile, Cingular/AT&T, Nextel, Sprint/Helio, Telflip, T-Mobile, Verizon, and Virgin Mobile.
- Host-Based Schedules - The new feature allows the system administrator to define schedules that are executed at the Application Server. The schedules are used by the conditions in the Global Linkage menus as well as executing Global Macros when the schedule changes.
- System Calendar - The system calendar allows users to view host-based on events on an interactive calendar and assign recurrence patterns to specific events such as global macros, backup and normal reminders.
- Enhanced Archive Service - This background task moves older transactions to another SQL Server.
- Support for AP and SCP Gateway services on the same computer
- License Manager - A single application manages all licenses for each licensed component.
- Updated Installer - The previous installers have been replaced with a single installer with selectable components simplifying installation.
- Clients and Gateways can connect to the Application Server by IP address or computer name. This allows the application server to be configured as DHCP. The port number can also be changed from the default of 11000.
- The Application server to SQL Server connection now offers additional connection options including encryption. These are all configured in the Start Up parameters for the Eclipse Server.

Product availability is immediate. Contact a DHS sales representative to order or call 888-592-1670 for additional information.
